

Table of Contents

Foreword	xi
Issue 1	1
1.1 The Houghton Telescope: An Optimum Compromise?	1
1.1.1 Requirements for an Optimum Compromise	1
1.1.2 Possible Instruments	2
1.1.3 Enter the Houghton	4
1.1.4 Optical Performance	4
1.1.5 Diagonal Mirror Size	5
1.1.6 Conclusion	7
1.2 The World of Unobstructed Reflecting Telescopes	7
1.2.1 Telescope Design	8
1.2.2 Telescope Designs	11
1.2.3 Future Designs	16
1.2.4 Conclusion	18
1.3 An Innovative 17.5-Inch Binocular	19
1.3.1 The Mount	21
1.3.2 The Mirror Cradle and Cells	21
1.3.3 The Secondary-Tertiary Head Assembly	22
1.3.4 A Multi-Mirror Telescope	23
1.3.5 Conclusion	23
1.4 A Schupmann Medial Telescope For the Serious Observer	23
1.4.1 The Objective	24
1.4.2 The Field Mirror	24
1.4.3 The Corrector	25
1.4.4 Glass Purchase	26
1.5 ATM Journal Staff	29
1.5.1 Introducing the ATMJ Staff	29
1.5.2 Richard A. Buchroeder	30
1.5.3 William J. Cook	31
1.5.4 John Gregory	33
1.5.5 Diane Lucas	35
1.5.6 Harrie G. J. Rutten	36
1.5.7 Martin van Venrooij	38
Issue 2	41
2.1 A 17.5-Inch Wood and Aluminum Split-Ring Telescope	41

iv Table of Contents

2.1.1 Lower Tube, Key to Mount Size	41
2.1.2 Tubular Truss and Rotation Ring	43
2.1.3 Rotating Upper Tube	44
2.1.4 Down-Sized Diagonal	44
2.1.5 Split-Ring	44
2.1.6 Cradle	45
2.1.7 The Base	46
2.1.8 North and South Bearings for RA	47
2.1.9 Setting Circles	47
2.1.10 Weight Data	48
2.1.11 References	48
2.2 Industrial Fabrication of Small Lenses	49
2.2.1 Generation	49
2.2.2 Grinding	51
2.2.3 Polishing	52
2.2.4 About the Author	54
2.3 Front-Loaded Collimation	54
2.4 Four-Collimation-Point Mirror Cell	56
2.4.1 Side-to-Side Mirror Alignment	57
2.4.2 Four-Point Collimation Adjustment	57
2.4.3 Making the Cell Removable	59
2.4.4 Mirror Spotting	60
2.4.5 Conclusion	61
2.5 Sub-Aperture Maksutov Correctors	61
2.5.1 Design No. 1	61
2.5.2 Design No. 2	62
2.5.3 Design No. 3	62
2.5.4 Design No. 4: Field Visual	64
2.5.5 Design No. 5: Field Photo-Visual	64
2.5.6 Design No. 6: Field Photo-Visual, $f/7$	64
2.5.7 General Remarks on the Specifications	65
2.6 Easy Finder Alignment	68
2.7 The Perfect Telescope Is...	69
2.7.1 Cost	69
2.7.2 Aperture and Portability	69
2.7.3 Aperture	70
2.7.4 Optical Performance	70
Issue 3	71
3.1 The Stevick-Paul Off-Axis Reflecting Telescope	71
3.1.1 How to Make a Stevick-Paul Telescope	72
3.1.2 Summary	77
3.1.3 References	78
3.2 A New Equatorial Platform Design	79
3.2.1 How it Works	79

3.2.2 Test Mount	81
3.2.3 Appendix	82
3.3 The 1993 Texas Star Party and Riverside Conference.....	86
3.3.1 On to Riverside	89
3.4 The Eye and the Use of Telescope Optics, Part I.....	93
3.5 A Photographic Tele-Compressor For Newtonians.....	98
3.5.1 Design	99
3.5.2 Performance	101
3.5.3 Construction	101
3.5.4 Proposed Tele-compressors for Fast Newtonians	101
3.6 Buried Gold in that Old SCT.....	101
3.6.1 Reduced Central Obstruction	102
3.6.2 Additional Tips for Improving Telescope Performance ..	104
3.7 Q and A For the Telescope Maker.....	105
3.7.1 As for the Glass Itself	106
3.8 From the Bench.....	108
3.9 The Perfect Telescope Is a 20 X 80 Binocular	111
Issue 4	113
4.1 A 17.5-inch Telescope That is Easy to Set Up.....	113
4.2 Improve Your Telrad	116
4.2.1 Radio Shack parts:	117
4.3 The Houghton-Cassegrain Telescope	117
4.3.1 Discovering The Houghton	117
4.3.2 Exploring Various Designs	118
4.3.3 Enter ZEMAX	118
4.3.4 The Sigler-Houghton	119
4.3.5 Designing the Cook-Houghton Planetary Telescope	119
4.3.6 Here and Now	120
4.3.7 The Down Side	120
4.3.8 The Cost of the Glass	120
4.3.9 The Central Obstruction	122
4.3.10 Testing the Corrector	123
4.3.11 Conclusion	123
4.3.12 Additional Reading	124
4.4 Astrofest 1993	124
4.4.1 Astrofest 1993 Merit Awards	131
4.5 The Krupa Collimator	132
4.6 The Eye and the Use of Telescope Optics, Part II	133
4.7 Letter to the Editor	139
4.7.1 Eye Relief vs. Field of View	139
4.8 Instant Wavefront Analysis	140
4.9 A “Sidereal Hinge” Equatorial Platform	144
4.9.1 Construction Notes:	148

vi *Table of Contents*

4.9.2 Conclusion	150
4.9.3 Addendum	150
4.10 From the Bench: Binoculars and Optical Coatings	151
Issue 5	153
5.1 Building a Split-Ring Porter Equatorial	153
5.2 A 200 mm <i>f</i>/4 Houghton Telescope	163
5.2.1 Making the Corrector Lenses	165
5.2.2 Construction of the Telescope	166
5.2.3 Provisions for Collimation	169
5.2.4 Mounting and Drive	169
5.2.5 A Summary of the Main Characteristics:	170
5.3 A Reclining Chair Binocular Mount	170
5.3.1 Parts List	176
5.4 An Illuminated Viewer-Magnifier for Star Charts	177
5.5 Telescopes For CCD Imaging	180
5.6 Baffling Baffles	183
5.6.1 Enter the Baffle	183
5.6.2 A Simple Solution	183
5.6.3 Cutting the Baffles	184
5.6.4 Placement of the Baffles	185
5.6.5 Assembly	185
5.7 The Maksutov Telescope: Past and Present	186
5.7.1 The Invention	186
5.7.2 Theory Becomes Reality: A Chronology	187
5.8 From the Bench Binocular Collimation, Part I	191
5.9 Viewpoint	192
5.9.1 Additional Reading	193
Issue 6	195
6.1 Riverside 1994	195
6.2 Impressions of Riverside 1994	202
6.3 Telescopes for Observing Planets	205
6.3.1 Image Contrast	207
6.3.2 Secondary to Focal Point	210
6.3.3 Secondary Diameter Determined by Image Size	210
6.3.4 Reduced Secondary Mirror Size	211
6.3.5 Telescope Modifications	212
6.3.6 Modifications for Schmidt-Cassegrains (SCT)	213
6.3.7 Offset Newtonian Secondary Mirror	216
6.3.8 Apodizing Screens and Other Devices to Reduce Spider Diffraction Spikes	218
6.4 Techniques and Hints for Lunar and Planetary Observing ..	218
6.4.1 The Atmosphere	219
6.4.2 Site Selection	219

6.4.3 The Telescope	221
6.4.4 Tube Currents	221
6.4.5 Focal Ratio	222
6.4.6 Newtonian Diagonal Size	223
6.4.7 Collimation	223
6.5 Texas Star Party 1994	225
6.6 Much Better Bearings	226
6.7 Telescopes for CCD Imaging, Part II	227
6.8 A Closer Look at High Magnification	229
6.9 From the Bench Binocular Collimation, Part II	235
6.9.1 Eccentric Ring Alignment	235
6.9.2 Push-Pull Alignment	237
6.9.3 Three-Point Objective Alignment	237
Issue 7	241
7.1 Too Many Diffraction Rings	241
7.2 Stellafane 1994	243
7.2.1 Evening Program	244
7.2.2 The Background on Peter Hirtle's Tri-Schiefspiegler	246
7.2.3 Merit Awards Stellafane 1994	248
7.3 The Perfect Telescope Is	249
7.4 Astrofest 1993	251
7.4.1 Merit Award Recipients	258
7.5 Astrofest 1993—A Second View	258
7.6 The Joys of Low-Power Viewing	261
7.6.1 Field Considerations	261
7.6.2 f/# Considerations	262
7.6.3 Exit Pupil Considerations	262
7.6.4 Low Power Limits	263
7.6.5 “RFT”	263
7.6.6 What to View	264
7.7 Letter to the Editor	265
7.8 Telescopes For CCD Imaging, Part III	267
7.9 From the Bench Binocular Collimation, Part III	269
7.9.1 Collimation	270
7.9.2 The Basics:	273
7.9.3 Helpful Hints:	273
7.10 Table Mountain Star Party 1994	275
7.11 Merit Awards Table Mountain Star Party 1994	279
7.12 King of The Hill	280
Issue 8	283
8.1 The Shelley Collimating Aid	283
8.1.1 Construction	283
8.1.2 Parts	285

8.2	Winter Star Party 1995	285
8.3	A Short History of Telescope Testing	288
8.4	The Complete Dobsonian	293
8.5	The Jet Engine Telescope	297
	8.5.1 Design Objectives:.....	298
	8.5.2 The Fuselage.....	298
	8.5.3 The Diagonal Holder.....	299
	8.5.4 Diagonal Mirror and Focuser.....	300
	8.5.5 Woodworking.....	302
	8.5.6 Primary Mirror Cell.....	302
	8.5.7 Rotating Tube Cradle.....	302
	8.5.8 Performance.....	303
8.6	Telescopes for CCD Imaging, Part IV	304
8.7	Tips for the Big Dobsonian Builder	306
8.8	The Springsonian Telescope	310
	8.8.1 A Few Notes on the Design.....	313
Issue 9	315
9.1	Stellafane 1995	315
9.2	Dedication of The McGregor Observatory	320
9.3	Notes on Making a 12½-Inch Full-Thickness Mirror of Good Quality	323
	9.3.1 Introduction.....	323
	9.3.2 Curve Generation.....	323
	9.3.3 Fine Grinding.....	325
	9.3.4 Polishing Lap Construction.....	325
	9.3.5 Polishing and Correction of Zonal Defects.....	326
	9.3.6 Figuring.....	327
	9.3.7 Concluding Remarks.....	328
	9.3.8 Other References.....	329
9.4	An Easy Way to Achieve Accurate Focus	330
9.5	The Making of Voyager, a Binocular Chair	333
9.6	The Perfect Telescope Is	338
9.7	Comments on Riverside 1995 and the Arrival of “The List” ..	339
9.8	The Early History of Binoculars	341
9.9	Alika K. Herring on Telescope Optics, a Telephone Interview	344
Issue 10	349
10.1	Veiling Glare	349
	10.1.1 What Makes a Good Image.....	349
	10.1.2 Testing for Veiling Glare in Your Instrument.....	351
	10.1.3 Expected Veiling Glares.....	353
	10.1.4 Addendum.....	354
10.2	A Guide to Making Schmidt Correctors	355
	10.2.1 First—Why the Vacuum Method?.....	355

10.2.2 Literature and Formulae	355
10.2.3 Tools	355
10.2.4 The Vacuum Pan	356
10.2.5 The Glass	358
10.2.6 Mounting the Corrector to the Pan	359
10.2.7 Testing	360
10.2.8 A Few Extra Notes	361
10.2.9 Other Articles of Interest:	362
10.2.10 Related, But Not Using the Vacuum Method	362
10.3 The Perfect Telescope is a YOLO Reflector.....	363
10.4 An Improved Moving-Mirror Focuser	
For Compound Telescopes	364
10.5 Table Mountain Star Party 1996	368
10.6 Riverside 1996	370
10.6.1 RTMC Awards '96	374
10.7 Stellafane 1996.....	375
10.7.1 Dobs Galore	376
10.7.2 Equatorial Scopes	376
10.7.3 That's all folks!	380
10.7.4 Telescope Competition Summary—Stellafane '96	380
10.8 Telescopes for CCD Imaging, Part V	381
Issue 11	385
11.1 A Dialogue on Spider Diffraction	385
11.1.1 Appendix A	406
11.1.2 Appendix B: Calculation of Diffraction Figures	407
11.2 A Springfield Mounted 9-Inch Refractor	408
11.3 Telescope Making Renaissance in Bellingham.....	416
11.4 Annular Baffles for Barlow Lenses	419
11.4.1 References:	421
11.5 Rangefinders and Stereo Telescopes	421
11.6 Optimizing Secondary Size for Newtonian Telescopes	425
11.7 Rebuilding a 60 mm Spectroheliometer.....	429
11.8 An Enhanced Foucault Test For Astronomical Mirrors.....	431
11.8.1 Taking the Readings	432
11.8.2 <i>F</i> /Ratios, Image Size and Radius Conversions	434
11.8.3 Data Reduction	435
11.8.4 Helpful Hints	437
11.9 Imaging in CCD Color.....	437
11.9.1 Quadcolor Imaging	439
11.9.2 Color Accuracy	440
11.9.3 Current Status	441
Index	443
