

Table of Contents

Foreword	vii
Issue 12	1
12.1 A 22-Inch Portable Telescope	1
12.1.1 Optical Tube and Rocker Box	1
12.1.2 The Driving Platform	3
12.2 Choosing a Wide-Field Telescope	6
12.2.1 Off-Axis Aberrations of Newtonian Reflectors	6
12.2.2 The Newtonian Telescope	7
12.2.3 The Schmidt Camera	7
12.2.4 Schmidt-Newtonian	8
12.2.5 Wright Camera	8
12.2.6 Wright Telescope	9
12.2.7 Lensless Schmidt Camera	9
12.2.8 Lensless Schmidt Telescope	10
12.2.9 Summary	11
12.3 Making Large Thin Mirrors	11
12.3.1 What Kind of Glass and What Thickness Should I Use?	12
12.3.2 What About Mirror Size and Focal Ratio?	13
12.3.3 How Good Can I Make a Large Thin Mirror?	14
12.3.4 Preparation for Grinding	15
12.3.5 Making a Plaster Tool	16
12.3.6 Rough Grinding	16
12.3.7 Fine Grinding	18
12.3.8 Making a Polishing Tool	19
12.3.9 Polishing	20
12.3.10 Figuring	22
12.3.11 The Matching Ronchi Test	25
12.3.12 Corrective Strokes	26
12.3.13 Some Examples	28
12.3.14 References	29
12.3.15 Further Information	29
12.4 Noise in CCD Cameras	29
12.5 An Experimental Portable Observatory	35
12.5.1 The Construction Project	37
12.5.2 Putting It All Together	39

iv Table of Contents

12.5.3 Using The System	39
12.5.4 Prospects for the Project	41
12.6 Mirror Making and Testing Hints.	42
12.6.1 Plaster Tools	42
12.6.2 Pitch Laps	45
12.6.3 Preparing the Mirror	45
12.6.4 Foucault Testers	49
12.6.5 Couder Masks	51
12.7 Recent Thoughts on a Schiefspiegler.	52
12.8 Riverside & Stellafane 1998	55
12.9 Riverside Telescope Makers Conference Awards—1998	59
Issue 13	61
13.1 Mirror-O-Matic Polisher/Grinder.	61
13.1.1 Design and Construction	62
13.1.2 Operation Speed	65
13.1.3 Speed and the Gritmaster 2000	66
13.1.4 Conclusions	67
13.1.5 Mirror-o-Matic Operations Manual	68
13.1.5.1 Mirror Centering	69
13.1.5.2 Spherometers	69
13.1.5.3 Beveling the Mirror Blank	71
13.1.5.4 Rough Grinding	71
13.1.5.5 Fine grinding	73
13.1.5.6 Polishing	74
13.1.5.7 Figuring	76
13.1.5.8 Turntable and Eccentric Rotational Speeds.	77
13.2 Digital Knife-Edge Test Reduction	80
13.2.1 Introduction	81
13.2.2 Video/Frame-Capture Data Gathering	83
13.2.3 Reducing Digital Data	85
13.2.4 Analysis	91
13.2.5 Errors	93
13.2.6 Addendum	96
13.2.7 Addendum to Book Publication	97
13.2.8 Additional Comments	98
13.3 Telescopes for CCD Imaging (Revisited)	98
13.3.1 The Sine Qua Non: A Good Mounting	98
13.3.2 The Scope	99
13.3.3 Proposition 1: The best telescope is the one you have now.	99
13.3.4 Proposition 2: The best telescope is the most expensive one.	101
13.3.5 Proposition 3: The best telescope is the KISS telescope.	101
13.4 Design and Construction of a Modern Herscheliana, Part 1	102
13.4.1 Designing the Optical Layout	104

13.4.2 The Tilted Eyepiece	106
13.4.3 Making the Off-Axis Paraboloid	108
13.4.4 Harness Design	109
13.4.5 Computer Modeling and the FEM	110
13.4.6 Levers and Attachments	114
13.4.7 Figuring	119
13.4.8 Final Harness Design	122
13.4.9 Results	123
13.5 Scrap Parts and the Life of the ATM	124
Issue 14	129
14.1 Calculating Mirror Zones.	129
14.1.1 References	131
14.1.2 Letter to the Editor from Nils Olof Carlin	131
14.2 Figuring a Quartz Schmidt Corrector with Petal Laps	134
14.3 Design and Construction of a Modern Herschelian, Part 2 . .	138
14.3.1 Mounting and Equatorial Platform	142
14.3.2 Equatorial Platform	147
14.3.3 Baffling and Shrouding	149
14.4 The “What Next?” Crisis in CCD Imaging	154
14.4.1 Finding a Long-Term Goal	155
14.4.2 Three Cures	156
14.4.3 Cure #1: An Observing Program	156
14.4.4 Cure #2: Measure Stuff	156
14.4.5 Cure #3: Monitor Stuff	157
14.5 A General-Purpose Yolo You Can Build	160
14.5.1 Design Strengths and Weaknesses	161
14.5.2 The Design	162
14.5.3 Orthogonal Knife-Edge Tester	165
14.5.4 Making the Secondary	166
14.5.5 Making the Primary	167
14.5.6 Making the Telescope	167
14.6 Evolution of a 10 x 70 Binocular	169
14.6.1 Eye Relief Factors in the 10 x 70	173
14.6.2 Future Prospects	174
14.7 Some Notes on Baffling Newtonians	175
14.7.1 A Diagnostic Test For Stray Light	175
14.7.2 Finding the Visible Parts of the Tube Wall	175
14.7.3 Possible Paths for Stray Light	177
14.7.4 Grazing Reflections	179
14.8 Improved Test Methods for Elliptical and Spherical TCT Mirrors	179
14.8.1 Test Procedures for Any Conic Concave Surface	179
14.8.2 A Modified Caustic Test	180

vi *Table of Contents*

14.8.3 Test Procedure for a Convex Spherical Surface	181
14.8.4 Test Procedure for Any Conic Convex Surface	182
14.8.5 Error Analysis and Summary	182
14.8.6 Modified Caustic Test	183
14.8.7 Null Test for Convex Spherical Mirrors	186
14.8.8 Modified Caustic Test For a Convex Conic Surface	186
14.8.9 Test Procedure:	189
14.9 Riverside 1999	191
14.9.1 Riverside Telescope Makers Conference Awards 1999	194
14.10 A Single-Tube Binocular Newtonian	195
Issue 15	201
15.1 ATMs Down Under	201
15.2 Amateur Telescope Making in Australia	
An Historical Perspective	208
15.2.1 Introduction	208
15.2.2 1850–1923: The Earliest Australian Telescope Makers	209
15.2.3 1924–1959: The Emergence of Astrophysics and the Eclipse of Amateur Astronomy	223
15.2.4 1960 Onwards: Rebirth of Australian Amateur Astronomy	231
15.2.5 Discussion	237
15.2.6 Conclusion	239
15.2.7 Acknowledgements	239
15.3 An 8-inch Siderostat Refractor	239
15.3.1 Theoretical Considerations	240
15.3.2 Basic Layout	241
15.3.3 Optical Design	246
15.3.4 Performance and Future Improvements	246
15.3.5 References	247
Issue 16	249
16.1 Stellafane 2000 Telescope Competition Awards	249
16.1.1 Junior Awards	249
16.1.2 Mechanical Design Awards	250
16.1.3 Craftsmanship Awards	250
16.1.4 Special Awards	250
16.2 An Ultralight Portable Dobsonian	251
16.2.1 Design Considerations	251
16.2.2 The Primary Mirror and Mirror Cell	253
16.2.3 The Mirror Box	254
16.2.4 Strut Clamps	256
16.2.5 The Upper Optical Assembly	257
16.2.6 The Secondary Mirror and Holder	258
16.2.7 The Altitude Bearings	259
16.2.8 The Rocker Box	260

16.2.9 Summary	261
16.3 Moving the Naegele 28-inch Reflector.....	263
16.3.1 The Building	263
16.3.2 The Telescope	264
16.3.3 Moving Day	265
16.3.4 What Now?	268
16.4 The Multi-Schiefspiegler	269
16.4.1 New optical designs for Schiefspiegler	271
16.4.2 Making a Multi-Schiefspiegler	274
16.4.3 Adjustment of the Telescope	278
16.4.4 First Light	279
16.4.5 Summary	279
16.5 John Mudge on Mirror Making—1777.....	280
16.6 First Project: A 6-inch f/22 Refractor.....	285
16.6.1 Grinding	289
16.6.2 Polishing	291
16.6.3 Figuring	292
16.6.4 Conclusion	293
16.6.5 Other References	295
16.6.6 Further Reading	295
16.7 Atmos—Optical Design and Analysis Software	296
16.7.1 Detailed Polychromatic Spot Diagram with Vignetting Analysis	297
16.7.2 Multispot Diagram (through focus/field)	297
16.7.3 Matrix Spot Diagram	297
16.7.4 Spherical Aberration and Coma	299
16.7.5 Field Curvature	299
16.7.6 Distortion and Lateral Color	299
16.7.7 Chromatic Focal Shift plot	300
16.7.8 Paraxial Calculation	300
16.7.9 Two Dimensional Layout	300
16.7.10 Wavefront Plot	300
16.7.11 Glass Diagrams	302
16.8 A Binocular Singlet Refractor	304
16.8.1 Optical Work	304
16.8.2 Mounting and Use	307
16.8.3 Sky Testing	307
16.8.4 Final Impressions	311
Issue 17-18	313
17-18.1 Telescope Optics Workshop 2001	313
17-18.2 Phase Contrast Testing	320
17-18.2.1 General Description of the Equipment	324
17-18.2.2 Using the Zernicke Phase Contrast Interferometer	337
17-18.2.3 Phase Contrast Testing	338

17-18.2.4 Conclusions	339
17-18.3 A Flat Tester Right Under Your Nose	345
17-18.3.1 Background	345
17-18.3.2 The Interferometer	346
17-18.3.3 The Water Test	352
17-18.3.4 Platform Design and Use	354
17-18.3.5 Bibliography	356
17-18.4 Perfect Optics in Earth Orbit	356
17-18.4.1 Images from Perfect Optics	357
17-18.4.2 Capturing the Image	358
17-18.4.3 Observing with the Amateur Space Telescope	362
17-18.4.4 What the ISS-AT Offers	364
17-18.5 A Portable Polar Siderostat	365
17-18.5.1 Design of the Mounting	366
17-18.5.2 The Telescope and Focusing Apparatus	368
17-18.5.3 The Mirror Drive Assembly	369
17-18.6 Lurie Anastigmats	375
17-18.6.1 Lurie's Solutions for Paraboloids	375
17-18.6.2 Analysis and Optimization	377
17-18.6.3 Solutions for Conic Solids of Revolution	
Other than Paraboloids	384
17-18.6.4 Special-Case Solution for an Ellipsoidal Mirror	385
17-18.6.5 Optimizing for the ATM and Optician	388
17-18.6.6 In Conclusion	389
17-18.7 A Zero-Shift Focusing Mechanism	393
17-18.8 Collimating a Newtonian Telescope	396
17-18.8.1 The Primary Mirror	396
17-18.8.2 The Secondary Mirror	396
17-18.8.3 The Eyepiece	397
17-18.8.4 Practical Collimation: An Eight-Step Method	404
17-18.8.5 Offset and Non-offset Collimation	410
17-18.8.6 Collimating Tools	410
17-18.8.7 Literature	417
17-18.8.8 Notes	417
Index	419
